9MM BROWNING HI POWER Style BARRELS
SA 351Girsani FN

Underlug Surface may require fitting to assemble some
Pistols. Use extreme care when removing small
amounts of metal in order to assemble. Remove only .001
(.03MM) at a time until barrel and slide will assemble to
receiver.

Maintain the FLAT surface. This surface is an angular plane on 48'
minutes with center line of the bore, longitudinally. (semi fit
only) On MT surface will be flat no angle!!

BEFORE removing any material from the surface described, be sure
the barrel is properly fitted to the slide. Barrel
should go all the way upwards until seated into the radius in the
breech face area without binding on the breech face.

Breech face may need fitting so remove very small
amounts. (.001 or less) at a time.

If you are not experienced, have a qualified pistol smith or
toolmaker do the fitting, or return barrel and pistol to us
for fitting.
